#### 3 NSC – Marking Guidelines

- 1.5 The curing of concrete:
  - Increases the strength of concrete. ✓
  - Decreases the permeability of hardened concrete.
  - Improves durability of concrete by reducing cracks.
  - Makes concrete more watertight.
  - Minimises shrinkage cracks in concrete.
  - Provides volume stability.
  - Cured concrete can carry more weight without breaking/crumbling than uncured concrete.
  - Prevents rapid drying of concrete.
  - Curing ensures that the hydration process continues.

#### ANY ONE OF THE ABOVE

#### 1.6

- 1.6.1 Multi detector ✓
- 1.6.2 Tool A is used:
  - to detect materials found in/behind walls, ceilings and underneath floors, including ferrous and non-ferrous metals, electrical wiring, wood and metal studs. ✓
  - to locate steel bars and copper pipes. ✓
  - in carpentry, plumbing, and construction.
  - to measure the distance to/from covered objects.

#### ANY TWO OF THE ABOVE

- 1.6.3 The batteries must be removed from the tool:
  - to prevent the battery from running flat/battery can die. ✓
  - to prevent acid leaks from batteries damaging the tool.

#### ANY ONE OF THE ABOVE

#### 1.7

- 1.7.1 A Bolt and nut/Bolt ✓
  - B Rawl bolt ✓

#### 1.7.2 Bolt and nut

- Bolts and nuts are used to secure pipe supports to metal parts. ✓
- To join components together.

#### Rawl bolt

- A Rawl bolt is used to fix a truss hanger to a wall. ✓
  - To fix brackets/structures/panels to a wall/concrete.
- For construction, renovation and industrial work

#### ANY TWO OF THE ABOVE

(1)

(1)

(2)

(1)

(2)

#### QUESTION 2: GRAPHICS AS METHOD OF COMMUNICATION (GENERIC)

#### ANSWER SHEET 2

NO.	QUESTIONS	ANSWERS	MARKS
1	Identify FIGURE <b>A</b> .	South Elevation/Elevation 🗸	1
2	Identify FIGURE <b>B</b> .	Ground floor plan/floorplan ✓	1
3	Identify number <b>4</b> .	First floor level/Second floor level/Suspended floor/Floor level/ dash line/ FFL/Expansion joint ✓	1
4	Identify number <b>5</b> .	Window Sill ✓	1
5	Identify number <b>9</b> .	Hand wash basin/Wash basin/Washing basin/HWB/basin ✔	1
6	Identify number <b>10</b> .	Water closet/WC/Toilet pan ✔	1
7	Identify number <b>11</b> .	Bath/B ✓	1
8	On what date was the plan printed?	2018/10/02 🗸	1
9	Who drew the building plan?	JP Maloi ✔	1
10	Name the feature in the column for the notes in FIGURE 2 that must be installed in front of the sliding door.	Ramp 🖌	1
11	Name the feature in the column for the notes in FIGURE 2 that must give access to the first floor.	Staircase/Stairs/Stairway <b>√</b>	1
12	Identify the type of roof that is used for the building in FIGURE <b>A</b> .	Gable roof ✓	1
13	Explain the purpose of number <b>1</b> .	To cover the opening/close the gap between the two slopes of the roof. ✓ Prevent water and other elements from entering the roof.	1
		ANY ONE OF THE ABOVE	

14	Explain the purpose of number <b>2</b> .	<ul> <li>To prevent water from falling onto the ground ✓</li> <li>To collect rainwater</li> <li>To channel the rainwater into the downpipe</li> <li>To protect the wall from water</li> <li>To hide the rafters/finish off the roof</li> </ul>	1
15	Explain the abbreviation FFL at number <b>6</b> .	Finished floor level 🗸	1
16	Explain the purpose of number <b>7</b> .	To channel the water from the gutter to the ground. ✓	1
17	Explain the meaning of the arrow on the feature that must be installed in front of the sliding door.	It indicates the direction of the slope of the ramp/it indicates the slope. ✓	1
18	Explain what is meant by 1:10 indicated on the symbol in the notes.	It indicates the slope or the gradient of the ramp/for every 10 metres horizontally rises 1 metre vertically.	1
19	Which room will feature <b>15</b> serve?	The bathroom. ✓	1
20	Explain the short dash lines on the windows.	<ul> <li>Indicates what direction the window is opening/window opening. ✓</li> <li>Indicates the location of the hinges.</li> <li>Indicates the location of the casement stay.</li> </ul> ANY ONE OF THE ABOVE	1
21	Deduce the height of window <b>2</b> from the window schedule. 1,2 m or 1 200 mm ✓(Ignore units)		1
22	Deduce the width of window <b>3</b> from the window schedule.	2 m or 2 000 mm ✔(Ignore units)	1
23	On what elevation of the building is the bathroom window situated?	Western elevation/Western side 🗸	1

5

24	Differentiate between component number <b>3</b> and component number <b>8</b> .	<ul> <li>3 – window/window frame/reveal frame stile/casement stile ✓</li> <li>8 – sliding door /door frame/ door/reveal /sliding door stile ✓</li> </ul>	2
25	Differentiate between the light in the lounge and the light in the bathroom.	The light in the lounge is a fluorescent light/1 x $40W/2x40/3x40$ fluorescent light $\checkmark$ and the light in the bathroom is a normal ceiling light $\checkmark$	2
26	Recommend a suitable floor covering for the bathroom.	Tile/ Vinyl flooring (Novilon)/ Coloured screed/Polished or stained concrete flooring/Water proof laminated floor/carpet. ✓ ANY ACCEPTABLE ANSWER	1
27	Recommend an appropriate scale to which FIGURE <b>A</b> should be drawn, according to <i>SANS</i> .	1:50/100/200 ✓	1
28	Recommend an alternative sanitary fitment to replace number <b>11</b> that will serve a similar purpose.	Shower ✓	1
29	Calculate the internal area of the office in m <sup>2</sup> Show ALL calculations.	$4 \text{ m} \checkmark x 3 \text{ m} \checkmark = 12 \text{ m}^2 \checkmark \text{ OR } 12$ $4 000 \checkmark X 3 000 \checkmark = 12 000 000 \text{ mm}^2$	3
30	Calculate the perimeter of the building. Show ALL calculations.	Positive marking $(220 + 3\ 000 + 110 + 2\ 800 + 220) \checkmark x 2 \checkmark$ = 6 350 x 2 =12 700 mm $\checkmark$ $(220 + 4\ 000 + 110 + 2\ 000 + 220) \checkmark x 2 \checkmark$ = 6 550 x 2 = 13 100 mm $\checkmark$ 12 700 + 13 100 mm = 25 800 mm $\checkmark$ OR = 25,8 m	7
		TOTAL	40

	OR OR	(2)

## ANY TWO OF THE ABOVE OR ANY OTHER SHAPE RESEMBLING A SQUARE OR ROUND SHAPE/ 2 AND 3 DIMENSIONAL DRAWINGS ACCEPTABLE

3.12

- 3.10 Screwed on to the face of the wall. ✓
  - By means of a bracket.
  - Fixed to face of wall using Rawl bolts or sleeved anchors by means of a bracket.

#### ANY ONE OF THE ABOVE

- Timber that is bolted to the top of the wall.
  - Nailed or screwed to the wall. ✓
  - A galvanised strap/hoop iron nailed or built into the wall.
  - Tie with roof wire built into wall.

#### ANY TWO OF THE ABOVE

- Supports the steel and withstands the loads. ✓
  - The pin serves as a pivoting point to adjust the angle or to lower the steel section.
  - The pin can be removed to separate the steel section from the base.
  - To keep the steel section attached to the base plate/concrete base.

#### ANY ONE OF THE ABOVE

## QUESTION 4: EXCAVATIONS, FORMWORK, TOOLS AND EQUIPMENT AND MATERIALS (SPECIFIC)

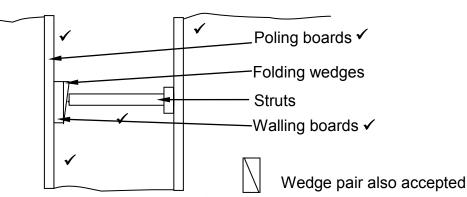

- 4.1 4.1.1 C ✓
  - 4.1.2 D ✔
  - 4.1.3 F ✔
  - 4.1.4 E ✓
  - 4.1.5 A ✔

(5)

- 4.2.1 Keep excavated soil away from edge at least 600 mm. ✓
  - Identify any equipment that will affect trench stability. ✓
  - Trenches should be inspected at the start of each shift. ✓
  - Trenches should be inspected after a rain storm.
  - No worker will be allowed to work or move in trenches deeper then 1,5 metres if the sides are not protected by formwork or braced.
  - Test for atmospheric hazards (low oxygen, hazardous fumes and toxic gases) when trenches are more than 1,3 metres deep.
  - No load vehicle or plant equipment should be used, placed driven or used on or near the edge of any excavation where it is likely to cause a collapse and endanger workers lives.
  - A warning system for mobile equipment should be provided.
  - Always protect workers from loose rock or soil that could fall or roll from an excavation by installing protective barricades at appropriate intervals.
  - Prohibit workers from working on faces of slopes or benched excavations at levels above other workers, unless workers at a lower level is protected against hazards of falling or sliding material or equipment.
  - Members/parts of the support system (formwork or shuttering) should be securely connected to prevent sliding, falling material.
  - Avoid overloading members of support systems.
  - Formwork/shuttering should be removed in a manner that will protect workers from cave-ins.
  - Before temporary removal of individual formwork members/parts, additional precautions should be in place, installing other structural members.
  - Backfilling should always progress with the removal of the support system (formwork from the excavation).
  - The area should be cordoned off and warning signs must be posted and must be clearly visible.
  - Cover the entire work area after hours, especially if children might gain entry to the site.
  - A suitable barrier(fence) must be provided where any excavation is more than 2 metres deep.
  - Excavation sites should be well lit at night.
  - Red warning lights should be placed strategically to warn the public.
  - Workers should not work under suspended or raised loads of materials.
  - Always start dismantling the formwork from the bottom of the formwork.
  - Never work alone in deep excavations.

#### ANY THREE OF THE ABOVE

- 4.2.2 The site must be levelled. ✓
  - The site must be cleared properly, and all loose soil must be removed.✓
  - A baseline must be established. ✓

Shuttering correctly drawn

ASSESSMENT CRITERIA		MARK	CANDIDATE'S MARK
Folding wedges		1	
Walling boards		1	
Poling boards		2	
Struts		1	
Shuttering correctly drawn		1	
Any TWO labels		2	
	TOTAL:	8	

(8)

(3)

- 4.4 Good formwork should be:
  - made accurately to the dimensions. ✓
  - stable enough to bear the load of wet concrete.
  - bear the mass of workers on it.
  - able to withstand the vibrating and tamping of concrete.
  - strong enough to provide enough support, without too much deflection, until the concrete has set and cured.
  - easy to repair on site.
  - secured with wire nails so that it can be easily dismantled.
  - secured with bolts and nuts ranging from 13 mm to 19 mm in diameter.
  - should be sealed properly.
  - should be free of dirt such as saw dust.
  - quick and simple to erect to ensure the correct cover depth for the reinforcing.
  - removed only when concrete has cured.
  - close-fittings along seams and joints.
  - made of recyclable components.
  - fitted with plywood laggings for a smooth finish.
  - ensure the correct cover depth for the reinforcing in order to prevent structural failure.
  - sealed properly so that the concrete does not leak and form a honeycomb effect.

#### ANY ONE OF THE ABOVE

- 4.5.1 Beam formwork/Formwork for beams✓ (1) 4.5.2 A - Tie 50 mm x 25 mm at 600 mm centres ✓ B - Cleat 76 mm x 50 mm ✓ C - Fixing plate/Kicker plate 76 mm x 50 mm ✓ D - Brace/Strut 76 mm x 25 mm ✓ (4) 4.5.3 The shape of folding wedges simplifies the erecting and dismantling of formwork. ✓ Folding wedges can easily be removed by knocking one • away from the other.
  - Folding wedges help to keep formwork components sturdy/secured/stable.
  - Folding wedges play an important role in the levelling of formwork for beams, floor slabs and columns.
  - Folding wedges facilitate the raising or lowering of the formwork to the required height.
  - Folding wedges are used as pins to strengthen adjoining • (1) concrete formwork

#### ANY ONE OF THE ABOVE

- Sturdy/Rigid enough to bear the mass of wet concrete without • collapsing.✓
  - Stronger than wood and timber board products.  $\checkmark$
  - Easily removed when the concrete has set. •
  - Not as adaptable as timber shuttering. .
  - More expensive than timber.
  - Will last longer than timber.
  - Can be used repeatedly. •
  - Tight along the seams and joints so that concrete does not leak.
  - It's prone to rust.

#### ANY TWO OF THE ABOVE

4.7 4.7.1

4.6

- Operate with care and wear appropriate personal protective equipment. ✓
  - Check the controls for proper response before use. •
  - Check the condition of the machine at the start and end of each shift.
  - Never use a faulty machine.
  - Never lay the machine on its side.
  - Do not allow the vibrating pipe to make contact with any part • of the body or formwork.
  - Switch of the machine when it is left unattended.
  - Long use of the machine exposes the operator to vibrations. Stop if you feel numbness.
  - Switch off the machine and wait for all moving parts to stop before adjusting, repairing, inspecting or cleaning it.
  - Must be operated by a qualified person.

(2)

(2)

48

(2)

(2)

(2)

(2)

#### ANY TWO OF THE ABOVE

- 4.7.2
   Maintain like all machinery. Lubricate and adjust according to the manufacturer's instruction. ✓
  - Clean after use and store in a safe dry place. ✓
  - Service the concrete vibrator regularly.
  - Repair or replace damaged electric cords.

#### ANY TWO OF THE ABOVE

- Service the tamping rammer/plate compactor regularly. ✓
  - Remove loose dirt and soil after use. ✓
  - Maintain like all machinery, lubricate and adjust according to the manufacturers instruction.
  - Clean after use.
  - Store in a safe dry place.
  - Ensure that all parts are firmly attached to the machine.
  - Repair or replace damaged electric cords.

#### ANY TWO OF THE ABOVE

- 4.9 Ready-mix concrete:
  - is very expensive. ✓
  - delivery and pouring delays may affect the quality of the concrete. ✓
  - site batching in residential areas raises concerns about noise levels
  - must be poured within a specified time.
  - trucks may damage or soil house frontages and sidewalks.
  - contaminations of storm-water drains.

#### ANY TWO OF THE ABOVE

- 4.10 The purpose of the slump test:
  - is to test the density of the concrete before it is placed by determining the percentage of water it contains. ✓
  - Is to determine the workability and consistency of the batches that are mixed. ✓
  - To determine the slump of the mixture.

#### ANY TWO OF THE ABOVE

- 4.11 Water hosepipe or continuous spraying ✓
  - Water- retaining substances, such as damp sand, damp sacking, straw, hessian and canvas. ✓
  - Plastic membranes and plastic sheeting
  - Chemical curing products

#### ANY TWO OF THE ABOVE

(2) **[40]** 

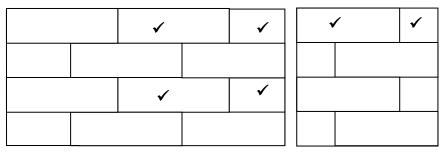

## QUESTION 5: PLASTER AND SCREED, BRICKWORK AND GRAPHICS AS MEANS OF COMMUNICATION (SPECIFIC)

5.1

- 5.1.1 A Wet the wall thoroughly  $\checkmark$ 
  - B Apply plaster ✓
  - C Scrape the plaster to obtain a flat surface/levelling  $\checkmark$
  - D Float to smooth the surface  $\checkmark$

#### 5.1.2 Straight edge ✓

5.2

#### LEFT VIEW INCORRECTLY DRAWN -1

CRITERIA ASSESSMENT	MARK	CANDIDATE'S MARK

Wall: 220 mm wide face brick	1	
Beam filling	1	
Wall plate 114 mm x 38 mm	1	
Tie beam 114 mm x 38 mm	1	
Rafter 114 mm x 38 mm	1	
Purlins 76 mm x 50 mm	2	
Corrugated iron roof covering	1	
Fascia board 230 mm x 38 mm	1	
Any TWO labels	2	
Print the scale below the drawing	1	
Application of scale		
One or two incorrect = 3		
Three or four incorrect = 2	3	
More than five incorrect = 1		
No measurement correct = 0		
TOTAL	15	

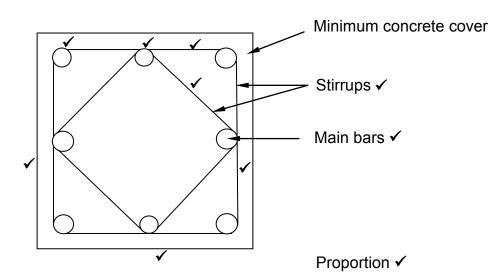

(15) **[30]** 

#### QUESTION 6: REINFORCEMENT IN CONCRETE, FOUNDATIONS, CONCRETE FLOOR AND QUANTITIES (SPECIFIC)

6.1

6.1.1	B✓	(1)
6.1.2	D✓	(1)
6.1.3	D✓	(1)
6.1.4	В ✓	(1)
6.1.5	A✓	(1)

6.2

ASSESSMENT CRITERIA	MARK	CANDIDATE'S MARK
Column	2	
8 Main bars	2	
Binders/Stirrups	2	
Min concrete cover	1	
Any TWO Labels	2	
Proportion	1	
TOTAL	10	

(10)

6.3 Pile foundations:

6.4

- can be used in poor/unstable/soft/loose soil. ✓
- can be used anywhere even in water. ✓
- the larger base ensures stability. ✓
- is relatively quick to install if the equipment is available.
- where pre-fabricated piles are used, much time is saved.
- resists tensile stress well.
- is quick and less expensive to produce.
- can be manufactured and transported elsewhere.
- can be installed in poor weather conditions.
- the length can easily be adjusted.
- offers good resistance against moving soil.

#### ANY THREE OF THE ABOVE

(3)

- Metal pipes that contain a dry concrete mix (gravel plug) are driven into a drilled hole in the ground. ✓
- The pipe is held firmly in position while a drop hammer is used to drive the pre-filled dry concrete mix (gravel plug) out of the pipe to form an extended base (toe) at the bottom of the hole. ✓
- Concrete is now poured into the pipe and compacted, using an internal drop hammer, until the pipe is filled to the top. ✓
- The steel pipe is slowly extracted as the concrete is poured into the pipe.

#### ANY THREE OF THE ABOVE

(3)

(1)

- 6.5 6.5.1 Hollow-core concrete block/Concrete block/Block ✓ (1)
  - 6.5.2 Used for the placement of the conduit pipes. ✓
    - Serves as insulation.
    - Reduce the weight.

#### ANY ONE OF THE ABOVE

6.5.3 Reinforced ribs/Ribs/Pre-stressed concrete ribs  $\checkmark$  (1)

#### 6.5.4 • Ribs (pre-stressed reinforced ribs) ✓

- Hollow-core blocks (polystyrene blocks can also be used) ✓
- Steel mat/Mesh/Steel/Reinforcement ✓
- In-situ cast concrete/Concrete
- Spacers

#### ANY THREE OF THE ABOVE

(3)

- 6.5.5 After the installation of a rib-and-block floor:
  - Ensure that the correct curing procedure is followed for 7 days to ensure a well-set slab. ✓
  - allow 28 days for setting of the concrete slab.
  - temporary props can be removed after the concrete slab has reached a crushing strength of 17 MPa.

#### ANY ONE OF THE ABOVE

- (1)
- 6.5.6 Because the units are precast, mechanical handling is required on site. ✓
  - The placing of the blocks between the ribs requires manual labour. ✓ (2)

6.6

#### **ANSWER SHEET 6.6**

Α	В	С	D	
			Skirting: Inside length of building	
			= 8 000 mm − 440 mm ✓ <b>OR</b> − 2(220)	
			= 7 560 mm ✓	(2)
			Skirting: Inside width of the building	
			= 5 000 mm − 440 mm <b>✓ OR</b> − 2(220)	
			= 4 560 mm ✓	(2)
			Total length = 7 560 + 4 560 x 2	
			=12,12 x 2	
			= 24,24 ✓ meter skirting needed – 0,900 m for the door.	
			= 23,34 m ✓	(2)
1/	7.56./		Screed: Inside area of building	
	7,56 ✓			
	4,56 ✓			
	<u>0,025</u> √	0,86 m <sup>°</sup> ✓	= 0,86 m <sup>3</sup> screed is needed	(4)

(10)

[40]

TOTAL: 200
