# basic education

Department: Basic Education **REPUBLIC OF SOUTH AFRICA** 

SENIOR CERTIFICATE/ NATIONAL SENIOR CERTIFICATE

**GRADE 12** 

# AGRICULTURAL SCIENCES P1

**NOVEMBER 2020** 

**MARKING GUIDELINES** 

**MARKS: 150** 

I.

These marking guidelines consist of 11 pages.

Please turn over

### **SECTION A**

#### **QUESTION 1**

			TOTAL SECTION A:	45
	1.4.5	Flushing/harvesting ✓	(5 x 1)	(5)
	1.4.4	Prostate 🗸		
	1.4.3	Hypoplasia 🗸		
	1.4.2	Free range ✓		
1.4	1.4.1	Sublingual 🗸		
	1.3.5	Progesterone 🗸 🗸	(5 x 2)	(10)
	1.3.4	Sterility 🗸 🗸		
	1.3.3	Artificial Insemination/Al VV		
	1.3.2	Dosing/drenching ✓✓		
1.3	1.3.1	Digestibility co-efficiency ✓✓		
	1.2.5	Both A and B $\checkmark \checkmark$	(5 x 2)	(10)
	1.2.4	B only ✓✓		
	1.2.3	A only 🗸 🗸		
	1.2.2	None 🗸 🗸		
1.2	1.2.1	Both A and B $\checkmark \checkmark$		
	1.1.10	B✓✓	(10 x 2)	(20)
	1.1.9	C/D ✓ ✓		
	1.1.8	C ✓✓		
	1.1.7	B✓✓		
	1.1.6	C√√		
	1.1.5	Ā ✓ ✓		
	1.1.4	D √√		
	1.1.3	AVV		
1.1	1.1.2	B√√		
1.1	1.1.1	C √ √		

### **SECTION B**

2.2

#### **QUESTION 2: ANIMAL NUTRITION**

#### Alimentary canal 2.1

2.1.1	Naming of the animal in DIAGRAM 1 - Chicken/fowl/poultry ✓ DIAGRAM 2 - Cattle/sheep/goats ✓	(1) (1)
2.1.2	Identification of the letters	
	(a) $B \checkmark$ (b) $C \checkmark$ (c) $A \checkmark$	(1) (1) (1)
2.1.3	<ul> <li>TWO adaptations of the rumen to digest feed rich in fibre</li> <li>Presence of micro-organisms/rumen micro-flora ✓</li> <li>Presence of papillae/heat rods for the provision of heat ✓</li> <li>Contractions mix the food and bring it onto contact with micro-organisms ✓</li> <li>It has a large fermentation vessel ✓ (Any 2)</li> </ul>	(2)
Compo	nents of feed	(-)
Compo		
2.2.1	Identification of the components A - Minerals/elements ✓ B - Proteins ✓	(1) (1)
2.2.2	<ul> <li>TWO ways of supplementing minerals to animals</li> <li>Mineral lick ✓</li> <li>Drinking water/mixing it with water ✓</li> <li>Soil sods ✓</li> <li>Dosing/drenching ✓</li> <li>Injection ✓</li> <li>Cafeteria- style mineral provision/free -choice ✓</li> <li>Supplementing rations ✓ (Any 2)</li> </ul>	(2)
2.2.3	Indication of the component (a) Proteins/B ✓ (b) Carbohydrates ✓	(1) (1)

#### 4 SC/NSC – Marking Guidelines

#### 2.3 **Digestibility co-efficiency**

DC = <u>Dry matter intake (kg) – dry mass manure (kg</u>) x <u>100</u> ✓ Dry matter intake (kg) 1

Moisture content in feed: 15 kg x  $\frac{10}{100}$  = 1,5 kg

Dry material in feed: 15 kg − 1,5 kg = 13,5 kg ✓

OR

<u>90</u> x 15 kg = 13,5 kg ✓ 100

= <u>13,5 kg – 3,5 kg</u> x <u>100</u> ✓ 13,5 kg 1

$$= 74,07 \checkmark \% \checkmark$$
(5)

#### 2.3.2 Implication of the calculated value

- The feed was highly digested ✓
- 74,07% of feed is digested ✓
- 25,93% is excreted ✓ (Any 1) (1)

#### 2.3.3 **TWO factors contributed to the digestibility of the feed used** during the trial

- Composition of the feed/ration ✓
- Preparation of the feed/ration ✓
- Individuality/animal factor ✓
- Type of the animal ✓
- Age of the animal ✓
- Feed additives/supplements NPN/molasses ✓
- Palatability of the feed ✓
- Water intake ✓
- Age of the plant ✓
- Level of feeding ✓

#### 2.4 Energy value of feeds

#### 2.4.1 Energy important for production and maintenance Net energy/NE ✓

(1)

(2)

#### 2.4.2 **TWO reasons for knowledge of the energy value of the feed**

- To determine the type of animal diet ✓
- To determine feeding standards ✓
- Meet animal requirements at different stages of production ✓
- To determine ration formulation ✓ (Any 2) (2)

(Any 2)

#### 2.5 **Nutritive ratio**

2.5.1 **Calculation of the nutritive ratio (NR)** 

Nutritive Ratio = 1 : 
$$\frac{\%\text{DNNE}}{\%\text{DP}}$$
  $\checkmark$   
1 :  $\frac{62}{13}$   $\checkmark$   
1 : 4,77  $\checkmark$ 

Nutritive Ratio = 1 : 
$$\frac{\% TDN - \% DP}{\% DP} \checkmark$$
  
1 :  $\frac{75\% - 13\%}{13\%} \checkmark$   
1 : 4,77  $\checkmark$  (3)

2.5.2 Indication of the age group that will benefit most from the feed Young/growing/producing animal  $\checkmark$  (1)

#### 2.5.3 **TWO reasons for using the feed to feed young animals**

- Ration has a narrow nutritive ratio/less than 1:6 🗸
- Has more protein needed by growing animals ✓
- Low crude fibre content ✓ (Any 2)

#### 2.6 Planning and managing of the feed

#### 2.6.1 Appropriate term

Feed/fodder flow programme ✓

#### 2.6.2 **TWO importance of planning fodder production**

- To ensure safe use of resources ✓
- To meet the animal feed requirements throughout the year ✓
- To marginalise feed costs ✓
- To manage for production/animal feed ✓ (Any 2) (2)

#### 2.6.3 **TWO aspects to be considered when planning fodder** production

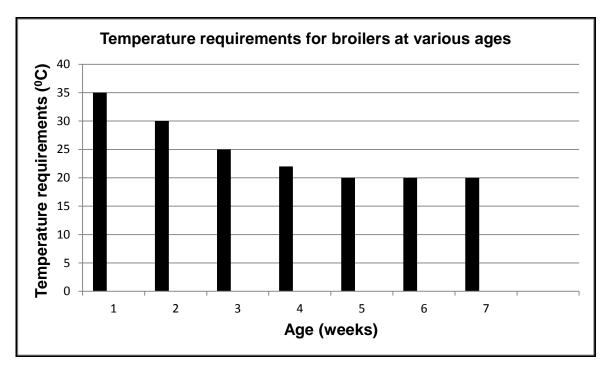

- The number of livestock ✓
- Nutrient content of the feed  $\checkmark$
- Possible feeds available ✓
- Requirements of the herd ✓
- Cost of buying the feed ✓
- Timing of production season ✓
- Carrying capacity of the veld ✓ (Any 2) (2

(2)

(1)

#### **QUESTION 3: ANIMAL PRODUCTION, PROTECTION AND CONTROL**

#### 3.1 **Temperature requirements for broiler chickens**

3.1.1 Bar graph

#### **CRITERIA/RUBRIC/MARKING GUIDELINES**

- Correct heading ✓
- X-axis: Correctly calibrated with label (Age in weeks) ✓
- Y-axis: Correctly calibrated with label (Temperature) ✓
- Correct units (weeks and °C) ✓
- Bar graph ✓
- Accuracy ✓

(6)

#### 3.1.2 Trend of temperature requirement for broiler chickens

- Temperature requirement of broiler chickens decreases ✓ with increase in age ✓
- The younger the chickens ✓
   the higher the temperature requirements ✓
- The older the chickens ✓
   the lower the temperature requirements ✓
   (Any 1)
   (2)

#### 3.1.3 Equipment to maintain temperature in a broiler house Heaters/air conditioners/fans/infra-red lamps/curtains/insulators ✓ (1)

#### 3.2 Indication of the animals showing the behaviour

3.2.1	Cattle 🗸	(1)
3.2.2	Sheep 🗸	(1)
3.2.3	Pigs 🗸	(1)
3.2.4	Chickens/poultry/birds ✓	(1)

3.3	Farming systems			
	3.3.1	Identification of the farming system PICTURE A - Commercial ✓ PICTURE B - Subsistence ✓	(1) (1)	
	3.3.2	<ul> <li>Comparison of the farming systems</li> <li>Commercial farming system - High environmental pollution due to heavy use of chemicals/release gases like methane ✓</li> <li>Subsistence farming system - Low environmental pollution due to low animal density/less use of chemicals ✓</li> </ul>	(1) (1)	
3.4	Parasite	S		
	3.4.1	<ul> <li>Classification of diseases according to pathogens</li> <li>Bacterial ✓</li> <li>Viral ✓</li> </ul>	(1) (1)	
	3.4.2	Meaning of zoonotic diseases Diseases that can be transmitted from animals to humans ✓ and humans to animals ✓	(2)	
	3.4.3	Reason for swine flu to be enzootic Affects specific animals in a particular region ✓	(1)	
	3.4.4	<ul> <li>TWO roles of the state in controlling notifiable diseases</li> <li>Implementation of legislation ✓</li> <li>Creation of buffer zones for testing and vaccination of clean stock before movement ✓</li> <li>Establish quarantine zones/isolation ✓</li> <li>Research ✓</li> <li>Prevent stock movement ✓</li> <li>Deployment of state veterinarians for testing and vaccination ✓</li> <li>Removal/culling of infected stock ✓</li> <li>Public awareness ✓</li> <li>Import/export bans ✓ (Any 2)</li> </ul>	(2)	
3.5	Internal	parasites		
	3.5.1	Identification of the internal parasites		

- Parasite A Round worm/nematodes ✓ •
- (1) (1) Parasite B - Tape/flat worm/cestodes ✓ •

## SC/NSC – Marking Guidelines

3.5.2	<ul> <li>TWO visible symptoms in sheep infested with roundworm</li> <li>Diarrhoea ✓</li> <li>Whitish mucus membranes in the inside of the eyelids ✓</li> <li>Anaemia ✓</li> <li>Weight loss ✓</li> <li>Rough coat ✓</li> <li>Loss of appetite ✓</li> <li>Bottle jaw ✓</li> <li>Rapid breathing ✓</li> <li>Coughing ✓</li> <li>Bloated stomach ✓</li> <li>Wasting diseases ✓</li> </ul>	
	<ul> <li>Pneumonia ✓ (Any 2)</li> </ul>	(2)
3.5.3	<ul> <li>TWO management practices to manage heavy infestation of a flock by internal parasites</li> <li>Resting, rotational grazing of camps ✓</li> <li>Avoid wet grazing areas ✓</li> <li>Feed animal well ✓</li> <li>Clean drinking water/sanitation ✓</li> <li>Veld burning ✓</li> <li>Fencing off infected areas ✓</li> <li>Use feeders to avoid contamination of food/zero grazing ✓</li> <li>Hygienic measures ✓</li> <li>Breeding animals that are more resistant ✓</li> <li>Good health programme (deworming/dosing) ✓ (Any 2)</li> </ul>	(2)
Plant p	oisoning	
3.6.1	Identification of the poison Maize fungus ✓	(1)
3.6.2	<ul> <li>TWO measures to prevent fungus contamination of stored feeds</li> <li>Store feeds in a dry cool place/avoid wet areas ✓</li> <li>Improved ventilation ✓</li> <li>Continuously checking the place for leaks/dampness where feed is stored</li> <li>Clean the sheds ✓ (Any 2)</li> </ul>	(2)
3.6.3	<ul> <li>TWO actions to be taken once the presence of maize fungus is detected in feeds</li> <li>Remove and dispose of the feed contaminated with fungus ✓</li> <li>Clean off the space and give animals fresh feed ✓</li> </ul>	

Use fungicides to prevent fungal growth  $\checkmark$ (Any 2) •

(2) **[35]** 

3.6

8

#### **QUESTION 4: ANIMAL REPRODUCTION**

#### 4.1 Reproductive system of a bull

4.1.1	Identification of parts
-------	-------------------------

	<ul> <li>A Testes/scrotum ✓</li> <li>B Penis/urethra ✓</li> <li>C Vas deferens/seminal tube/ductus deferens/sper</li> </ul>	m duct ✔	(1) (1) (1)
4.1.2	<ul> <li>ONE function of testes</li> <li>Secretion of hormone testosterone/male sex horm</li> <li>Production of sperm cells/male sex cells ✓         OR</li> <li>ONE function of the scrotum</li> <li>Protects the testis ✓</li> <li>Regulates temperature of the testis ✓</li> </ul>	none ✔ (Any 1) (Any 1)	(1)
4.1.3	<ul> <li>Role of seminal vesicles</li> <li>Secrete fluid that transports the spermatozoa ✓</li> <li>Protect the semen against pH changes ✓</li> <li>Provide energy for sperm cells ✓</li> </ul>	(Any 1)	(1)
Lack of	libido in bulls		
4.2.1	Term for the condition Lack of libido ✓		(1)
4.2.2	<ul> <li>THREE causes of lack of libido</li> <li>Immaturity/lack of experience ✓</li> <li>Overwork/exhaustion/over exertion ✓</li> <li>Malnutrition ✓</li> <li>Poor health/diseases/low testosterone ✓</li> <li>Change in environment ✓</li> <li>Stress ✓</li> <li>Temperament ✓</li> <li>Age/senility ✓</li> </ul>	(Any 3)	(3)
Proces	s of artificial insemination (AI)		
4.3.1	Identification of the hours after oestrus to get pregnancy rate 10 to 13 hours after onset of oestrus ✓	the highest	(1)
4.3.2	A reason why the cow would allow insemination first hour and 12 hours after the start of oestrus	between the	

The cow will be receptive to the bull/it will be on heat/in oestrus ✓ (1)

4.2

4.3

#### 10 SC/NSC – Marking Guidelines

4.3.3	TW • • • •	O visible signs the cow will show when in oestrus Allows mating/insemination ✓ Mucus strings from the vulva ✓ Swollen and red vulva ✓ Mounts others ✓ Hair on the back/rump are fluffed up ✓ Mud patches on her back ✓ Bellowing noises ✓ Cows are excited/restless ✓ Frequent urination ✓ Sniffs the genitals of other cows ✓ Raises their heads and curls her lips ✓		
	•	Decrease in milk production ✓	(Any 2)	(2)
4.3.4	ON • •	E reason to inseminate hours before ovulation Ovum has a shorter lifespan than a sperm cell ✓ Ovum needs to arrive when sperm cells are already v fertilisation ✓	vaiting for (Any 1)	(1)
4.3.5	ON • •	E requirement for a successful insemination Use of healthy/viable semen ✓ Technique performed by a skilled/experienced techni Insemination at the correct stage of oestrus ✓ Use the correct sterilised equipment ✓	cian ✔ (Any 1)	(1)
Fertilisa	ation			
4.4.1	Lab	pels		
	A B C	Egg cell/ovum/female gamete ✓ Sperm cell/spermatozoon/male gamete ✓ Zygote/fertilized egg cell ✓		(1) (1) (1)
4.4.2		me of the process represented by the illustration tilisation ✓		(1)

## 4.5 **Pregnancy**

4.4

4.5.1	Identification of the process Pregnancy/gestation ✓	(1)
4.5.2	<ul> <li>THREE stages of the process</li> <li>Ovum/stage of ovum ✓</li> <li>Embryo/embryonic stage/stage of embryo ✓</li> <li>Foetal/stage of foetus ✓</li> </ul>	(1) (1) (1)
4.5.3	Indication of the normal presentation of the calf Anterior 🗸	(1)

### 4.6 **Parturition**

	<ul> <li>4.6.1 The condition experienced by heifers calving for the first time</li> <li>Dystocia ✓</li> </ul>		
	4.6.2	<ul> <li>TWO signs of an animal experiencing birth problems</li> <li>Show signs of prolonged distress/excessive pain and discomfort ✓</li> <li>Foetus/after birth showing in birth canal without expulsion ✓</li> <li>Prolonged birth process ✓</li> <li>Exhaustion ✓ (Any 2)</li> </ul>	(2)
	4.6.3	<ul> <li>ONE cause of problems during birth in heifers</li> <li>Large foetus/small sized heifer ✓</li> <li>Small pelvic area ✓</li> <li>Inexperience ✓</li> <li>Incorrect presentation ✓</li> <li>Malformed foetus ✓</li> <li>Cervix not dilated ✓</li> <li>Twisted uterus ✓</li> <li>Weak labour ✓</li> <li>Diseases ✓</li> <li>Twinning/multiple birth ✓</li> <li>Hydrocephalus ✓</li> <li>Weak muscle contraction ✓</li> <li>Prolong gestation ✓</li> <li>Vaginal tear ✓</li> </ul>	(1)
	4.6.4	Hormone that initiates milk release Oxytocin ✓	(1)
	4.6.5	First milk produced in the first 3 days after calving Colostrum/beestings ✓	(1)
4.7	Embryo	transfer	
	4.7.1	Process in the scenario Embryo transfer/ER ✓	(1)
	4.7.2	Main importance of embryo transfer Creation of multiple offspring ✓ with the desirable characteristics of superior parents ✓	(2)
	4.7.3	Explanation of a donor cow Production of superior ova ✓ for implantation to inferior cows ✓	(2) <b>[35]</b>
		TOTAL SECTION B: GRAND TOTAL:	105 150
