- 9.2.2 From Faraday's Law, induced emf is directly proportional to the rate of change of magnetic flux, ✓✓ hence halving speed halves the rate, hence  $V_{\text{max}}$  is halved

Vanuit Faraday se wet, die geïnduseerde emk is direk eweredig aan die tempo van verandering van die magnetiese vloedkoppeling, die halvering van die spoed sal die tempo halveer dus sal  $V_{\text{maks}}$  halveer word.

**QUESTION / VRAAG 10**

- 10.1 It is a phenomenon in which electrons are emitted from a metal surface when light of a suitable frequency is shone on the metal surface. ✓✓

*Dit is die verskynsel waar die elektrone vrygestel word vanuit die metaal se oppervlakte wanneer lig van 'n gesikte frekwensie op die metaal oppervlakte geskyn word.*

(2)

- 10.2 Example:

What is the relationship between the frequency of light incident on the photocell and the maximum kinetic energy of the corresponding ejected photoelectrons?

Voorbeeld:

*Wat is die verhouding tussen die frekwensie van die invallende lig op die fotosel en die maksimum kinetiese energie van die ooreenstemmende vrygestelde elektrone?*
