INSTRUCTIONS AND INFORMATION

1. This question paper consists of FOUR questions.
2. Answer ALL the questions.
3. ALL drawings are in third-angle orthographic projection, unless otherwise stated.
4. ALL drawings must be prepared using pencil and instruments, unless otherwise stated.
5. ALL answers must be drawn accurately and neatly.
6. ALL the questions must be answered on the QUESTION PAPER, as instructed.
7. ALL the pages, irrespective of whether the question was attempted or not, must be re-stapled in numerical sequence in the TOP LEFT-HAND CORNER ONLY.
8. Time management is essential in order to complete all the questions.
9. Print your examination number in the block provided on every page.
10. Any details or dimensions not given must be assumed in good proportion.

QUESTION 1: ANALYTICAL (MECHANICAL)

Glven:

Two views of the assembled parts of a pin vice assembly, detailed views of the individual parts of the assembly drawn to a different scale, a parts list, a title block and a table of questions. The drawings are not presented to the indicated scales.

Instructions:

Complete the table below by neatly answering the questions, which refer to the accompanying drawings, title block and mechanical content.

QUESTIONS		ANSWERS	
1	What unit of measurement has been used on the drawing?		1
2	On what date was the drawing prepared?		1
3	What is the title of the drawing?		1
4	What is the telephone number of the draughting company?		1
5	If VIEW 1 is the front view, what would VIEW 2 be called?		1
6	What material is required for the handle?		1
7	What scale is indicated for the individual parts?		1
8	How many Ø2 pins are there in a single pin vice assembly?		1
9	How many pin vices must be manufactured?		1
10	Name the type of section shown at A.		1
11	Name the type of section shown at B.		1
12	What type of section would be produced by cutting plane P-P?		1
13	How many surfaces of the pin vice assembly must be machined?		1
14	Name the part on which the depth of the threaded hole for the clamp screw (part 6) would be measured.		1
15	Determine the complete dimensions at: C:	D:	2
16	Determine the complete angle at E.		1
17	With reference to the tolerance, determine the maximum and the minimum size for the dimension at F.	MAXIMUM:	1
		MINIMUM:	1
18	In the space provided above the views of the adjusting cone (ANSWER 18), use drawing instruments to determine the centre point of the arc. Show ALL construction.		4
19	In the space below (ANSWER 19), draw, in neat freehand, a machining symbol, with labels for the information and processes provided in the table, for the given surface.		4
20	In the space below (ANSWER 20), draw, in neat freehand, the SANS 10111 conventional representation for a bearing.		3

QUESTION 2: LOCI

NOTE: Answer QUESTIONS 2.1 and 2.2 ...

2.1: MECHANISM

Given:

- A schematic drawing of a mechanism consisting of crank OA, connecting rod AB and rocker CD
- The position of centre point O on the drawing sheet

Specifications:

- The positions of centre point O and point C of rocker CD are fixed.
- Connecting rod AB is pin-jointed to crank OA at A.
- Rocker CD is pin-jointed to AB at D.

Motion:

As crank OA rotates for one complete rotation, rocker CD oscillates around point C.

Instructions:

- Using centre point O, draw, to scale 1 : 1, the given schematic drawing of the mechanism and label ALL the given points.
- Trace the locus generated by point B for ONE complete rotation of crank OA.
- Show ALL construction.

[19]

 P_0

2.2: CAM

Given:

The bottom left-hand corner of the displacement graph, marked P, on the drawing sheet.

Motion:

A cam starts at the **maximum** displacement of 64 mm and imparts the following motion:

- There is a dwell period for the first 30° .
- It descends to its minimum displacement over the next 90° with uniform acceleration and retardation.
- It rises 36 mm over the next 45° with uniform motion.
- There is a dwell period for the next 30° .
- It then descends 22 mm over the next 30° with uniform motion.
- There is a dwell period for the next 45° .
- It returns to its original position over the last 90° with simple harmonic motion.

Instructions:

- Using corner P as the 0° position, draw, to a rotational scale of $120 \text{ mm} = 360^\circ$ and a displacement scale of 1 : 1, the displacement graph for the given motion.
- Label the displacement graph and include the rotational scale.
- Show ALL construction.

QUESTION 3: ISOMETRIC DRAWING

Given:

- The front view, top view and right view of a casting
- The position of point P on the drawing sheet

Instructions:

Using scale 1 : 1, convert the orthographic views of the casting into an isometric drawing.

- Use P as the starting and lowest point of the drawing.
- Show ALL construction.
- NO hidden detail is required.

QUESTION 4: MECHANICAL ASSEMBLY

Given:

- The exploded isometric drawing of the parts of a hydraulic cylinder assembly, showing the position of each part relative to all the others
- Orthographic views of each of the parts of the hydraulic cylinder assembly

Instructions:

- Answer this question on page 6.
 - Draw, to scale 1 : 1 and in third-angle orthographic projection, the following views of the assembled parts of the hydraulic cylinder assembly:
 - 4.1 The right view
 - 4.2 A half-sectional front view on cutting plane A-A. Show the top half of the assembly in section, as seen from the direction of the arrow on the exploded isometric drawing. The cutting plane is shown on the right view of the right end plate (part 3).
- NOTE:**
- Planning is essential
 - ALL drawings must comply with the SANS 10111 guidelines.
 - The convention of symmetry may NOT be applied.
 - Align point S on the connecting rod (part 4) with point S on the cylinder housing (part 2).
 - Show THREE faces of the M16 nut (part 10) on the half-sectional front view.
 - NO hidden detail is required.
